

Certification Requirements Investigation Gets Product to Market Quicker

A comprehensive analysis of your certification requirements prior to certification avoids obstacles and helps deliver savings

Maintain certification momentum and get to market faster

Keep certification on time and on track by getting a preliminary appraisal of your specific certification requirements, ahead of your main certification program. This service propels your product through the certification process sooner so you get to market faster and gain critical traction over competitors.

Certification Requirements Investigation deliverables

- Early communication with a UL engineer who will provide clear guidance in order help you to define your project certification needs
- A final certification test plan that is scoped in great detail and approved by a UL engineer, including where possible project timelines and milestones
- A detailed list of sample requirements
- Early identification of potential noncompliance issues
- A quotation for your main certification project

Expect these important benefits

- **Increased speed to market**
- Open discussion with a UL engineer enables you to raise your questions and discuss them in order to understand the project scope before you accept the main certification price quotation.

- Knowing what lies ahead helps you to avoid obstacles and build in efficiencies that accelerate certification process.
- Knowing the project timelines in advance helps with go-to-market-planning.
- Potential identification of non-compliant issues ahead of your final certification allows you adequate time to address and correct them and avoid future costs.
- **Cost-savings**
- An analysis of your certification requirements saves on costly redesign, re-tooling, and re-certification costs which also saves time to market. It's your direct route to savings.

A certification requirements investigation is the shortest distance between you and certification success. It will increase your comfort level through all steps of your certification experience with UL, and provide you satisfaction with speed of product to market.
