

UL Global Wire and Cable Solutions for Utilities, Renewable Integrators & EPC's

UL offers a flexible service portfolio to cover business needs for procurement, supplier qualification and inspection.

Reliability and performance of power cables has become a major concern for end users due to the growing complexity of a global supply chain along with technological, regulatory, risk and cost considerations. However, many organizations lack internal bandwidth for conducting inspections and stringent oversight of their power cable suppliers even though quality cables are a vital part of a well-functioning infrastructure.

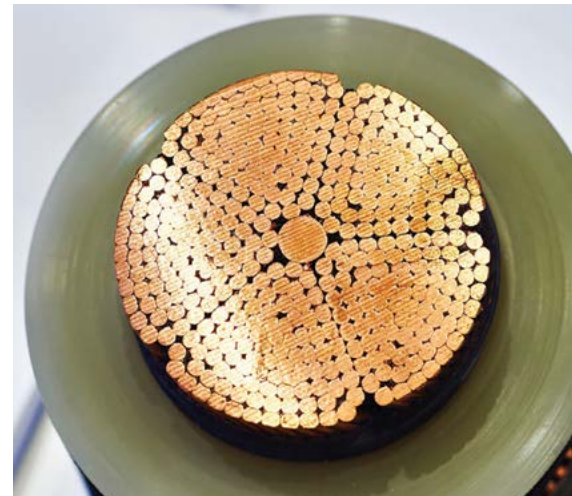

To address this concern, UL has introduced a customizable portfolio of solutions for performance and compliance of medium voltage cables used by electric utilities, renewable integrators and Engineering, Procurement and Construction Contractors (EPC's). Leveraging UL's in-depth knowledge of manufacturing, inspection and auditing, as well as a globally located staff of engineers and inspection and audit specialists, UL can either use the customer's specification and conformance criteria, or criteria developed by UL to evaluate the compliance of their supplier's cable in order to meet their specifications or applications.

The supplier audit and product inspections are uniquely designed to target producers of utility-type medium voltage cable and address industry concerns identified by expert medium voltage cable manufacturing and testing engineers with industry input. It combines industry standards, best practices, and UL's 120+ years of experience. The audit is designed to address concerns not met by other standards organizations, this includes the latest trends in the industry.

Service offerings

Service	Deliverable	Benefit
Procurement Specification Setting	Procurement and testing specification	Risk mitigation and better cable sourcing
Witness Testing	Test report	UL confirmation of test results performed at supplier's production location
Medium Voltage Cable Supplier Audit (MVCSA)*	Supplier audit report	Reliable report from a third-party audited lab
Medium Voltage Cable Inspection Program (MVCIP)*	Certificate of Inspection; Pre-shipment or regular inspection report	Global on-site inspection support Supply chain traceability
Termination and Jointing Training	Classroom teaching and training materials	Customized training to meet specific needs

*These services are specified by the user in their purchase specification to the manufacturer and directly billed to the manufacturer.

Program Benefits

- Address the growing concern of compliance in the supply chain
- Programs geared to specific applications and needs
- Increased peace of mind through programs offered by trusted third party laboratory
- Support customers' global procurement footprint and enhance product assurance
- Reduce staff time away from core responsibilities
- Help ensure compliance to standards and specifications and reduce liability and risk to all stakeholders
