

# Restricted-use Substances (RoHS) Compliance Services for Wire & Cable

## Certification for restricted substances in compounds and metallic components

*Do you provide RoHS compliant compounds and components to your cable customers? Are you required to supply independently certified RoHS cable to your customers? If so, then UL can help you!*

UL provides a RoHS Mark program for any UL Listed and Recognized wire and cable based on the European Directives for restricted substances:

- DIRECTIVE 2011/65/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (recast).
- DIRECTIVE (EU) 2015/863 of 31 March 2015

This program evaluates individual compounds and components used in wire and cable constructions for maximum acceptable substance concentration. These compounds and components are covered under Recognized component category TEPZ2. Proprietary compounds not for sale to the general industry may also be evaluated.

UL Certified wire and cable marked “-RoHS” are manufactured using these Recognized compounds and components.

UL Recognized materials are suitable for use when applied according to their conditions of acceptability and are covered under UL’s Follow-Up Service (FUS) program. The FUS program is designed to periodically check and test UL Certified products to ensure their consistent manufacture and ongoing compliance with recognition program requirements.

- Publicly Available Certification Confirmation
- Published on UL Product iQ™ – a trusted modern search engine platform
- Elimination of Repetitive Lot Testing
- Creates Level Playing Field for Industry
- Globally Recognized Standard / Test Methods

Individual compounds and components that have been evaluated for their restricted substance content and have been certified under UL’s Recognized Component program have the advantage of being published on Product iQ™ (<https://iq.ulprospector.com/info/>). An end-use product manufacturer can easily search and find the right wire and cable product materials for their need.
